Write a function employee(empid, name, salary) and call the function by changing the order of the arguments using keywords.

Your Code

```
1 def employee(empid, name, salary):  
2     print("EmpID:", empid)  
3     print("Name:", name)  
4     print("Salary:", salary)  
5  
6 employee(name="Jothesh A", salary=50000, empid=192511029)
```

Input

stdin input

Output

```
EmpID: 192511029  
Name: Jothesh A  
Salary: 50000
```

5 marks

Write a function book(title, author, price) and display the book details using keyword arguments.

Your Code

```
1 def book(title, author, price):  
2     print("Book Details")  
3     print("Title :", title)  
4     print("Author:", author)  
5     print("Price :", price)  
6  
7 book(title="Python Basics", author="Guido van Rossum", price=450)
```

Input

Title : Python Basics
Author: Guido van Rossum
Price : 450

Output

```
Book Details  
Title : Python Basics  
Author: Guido van Rossum  
Price : 450
```

**Q7 Recursive Functions**

5 marks

Write a recursive function to generate the Fibonacci series up to n terms.

Your Code

```
1 def fibonacci(n):  
2     if n <= 0:  
3         return []  
4     if n == 1:  
5         return [0]  
6     if n == 2:  
7         return [0, 1]  
8  
9     series = fibonacci(n - 1)  
10    series.append(series[-1] + series[-2])  
11    return series  
12  
13 n = int(input())  
14 print(*fibonacci(n))
```
