Menu Define

Write a Python program to perform an operation.

Sample menu

Enter the first unit diameter: 1.2 3.4

Enter the second unit diameter: 5.6 5.6

Menu

1. Add
2. Subtract
3. Difference (A - B)
4. Geometric Difference
5. Exit

Enter your choice: 1

Sample Output

Enter: 1.2, 5.6, 5.6, 5.6

Sample Input

Enter your choice: 2

Sample Output

Subtraction (A - B)

Sample Input

Enter your choice: 3

Sample Output

Difference (1.2)

Sample Input

Enter your choice: 4

Sample Output

Geometric Difference (1.2, 5.6, 5.6)

Sample Input

Enter your choice: 5

Sample Output

Program terminated

Your Code

```
1 def main():
2     a = input("Enter A: ")
3     b = input("Enter B: ")
4     print("Enter your choice: ")
5     choice = input("1. Add\n2. Subtract\n3. Difference (A - B)\n4. Geometric Difference\n5. Exit\n")
6     if choice == "1":
7         print("Addition of", a, "and", b, "is:", a + b)
8     elif choice == "2":
9         print("Subtraction of", a, "and", b, "is:", a - b)
10    elif choice == "3":
11        print("Difference of", a, "and", b, "is:", a - b)
12    elif choice == "4":
13        print("Geometric Difference of", a, "and", b, "is:", a * b)
14    elif choice == "5":

Q3 Exactly One Set

5 marks

Write a Python program to find the elements that appear in exactly one of three sets.

Input:

A={1,2,3}

B={3,4,5}

C={5,6,7}

Output:

(1,2,4,6,7)

Your Code

```

1 A={1,2,3}
2 B={3,4,5}
3 C={5,6,7}
4
5 result=set()
6
7 for x in A:
8     if x not in B and x not in C:
9         result.add(x)
10 for x in B:
11     if x not in A and x not in C:
12         result.add(x)
13 for x in C:
14     if x not in A and x not in B:
15         result.add(x)
16
17 print(" "+", ".join(map(str,sorted(result))))")
    
```

Q4 Unique Words

5 marks

Write a Python program to display the unique words in a sentence using a set.

Input:

python is easy python
{'python','is','easy'}

Your Code

```
1 sentence = input().strip()
2
3 words = set(sentence.split())
4
5 print(words)
```

Input

python is easy python
{'python','is','easy'}

Output

{'is', 'easy', 'python'}

Q6 Pair Sum

5 marks

Write a Python program to find all pairs of elements whose sum equals a given number.

Input:

List: 2 4 6 8 10
Target: 12

Output:

(4,8),(2,10)

Your Code

```
1 arr = list(map(int, input().split()))
2 target_line = input().strip()
3
4 target = int(target_line.split('=')[1].strip())
5
6 pairs = []
